## Proper Left Turn Procedures

- Signal, check your mirrors and check your blind spot
- Use controlled braking and approach the intersection.
- Stop at the legal point, which is the stop line, pedestrian cross walk or even with the stop sign.
- Search the intersection for vehicles, pedestrians and potential hazards.
- Turn your head in the direction of the turn before turning the steering wheel.
- Use light acceleration and begin to turn when your line of sight to the center of your intended lane does not cut across the curb line. Use light acceleration and turn the steering wheel simultaneously.
- Straighten the bus, gradually accelerate to the proper speed and check your rearview mirror.
